### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

## **DETAILED ACTION**

### **Information Disclosure**

The applicant is required to submit the references and/or background information described in the Description of the Related Art on pages 2 and 3 of this application.

### ***Election/Restrictions***

Applicant's election with traverse of claims 1-16 in the reply filed on 11/28/05 is acknowledged. The traversal is on the ground(s) that the election dated 11/28/05. This is not found persuasive because claim 17 specifically requires reading out the measured value via the connection pad, the reading out via another different pad constitutes a materially different process since another step of providing a different pad is required.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 9 is rejected under 35 U.S.C. 102(e) as being anticipated by Oehler et al. (US patent 6,518,900) or Nomura et al. (US patent 6,907,555).

With respect to claim 9, Oehler et al. teach a testing circuit, comprising of (see fig. 1 and associated text):

A measurement converter or conversion circuit 10 which is inherently capable of being configured to convert one circuit internal signal into a measured value and to output the measured value for receipt by an external testing device 12;

An activation unit 11 which is inherently capable of being configured to activate the measurement converter circuit in response to an activation signal.

Alternatively, with respect to claim 9, Nomura et al. teach a testing circuit, comprising (see fig. 2 and associated text):

A measurement converter or conversion circuit 34 which is inherently capable of being configured to convert one circuit internal signal into a measured value and to output the measured value for receipt by an external testing device;

An activation unit 20 which is inherently capable of being configured to activate the measurement converter circuit in response to an activation signal.

***Allowable Subject Matter***

Claims 1-8 and 12-16 are allowed.

Claims 10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Long Pham whose telephone number is 571-272-1714. The examiner can normally be reached on Mon-Frid, 10am to 5pm.
